ENDOSURE Testing is not currently covered by provincial healthcare. It may be covered by other medical insurance benefits.

ENDOSURE TIER-1 diagnostic test for endometriosis

The ENDOSURE test is a 30-minute, highly accurate, non-invasive diagnostic test for endometriosis. The test uses electroviscerography (EVG) to detect the GIMA biomarker for endometriosis, a characteristic "fingerprint" of abdominal seizure activity unique to endometriosis & adenomyosis sufferers. ENDOSURE offers diagnostic support to your clinician for a confident diagnosis of endometriosis without laparoscopy.

Highly Accurate

Females ≤ 35 years: 99% accurate
95% sensitivity
96% specificity

Females 36 years+: 98% accurate
91% sensitivity
95% specificity

Where to Access Testing

Find your nearest clinic at

TIER-1 Diagnostic Testing

Detects presence of all stages and subtypes of endometriosis, regardless of location in the body. ENDOSURE does not determine disease stage nor location of endometriosis lesions.

Appropriate for all ages of patients

Painless and non-invasive procedure, easy test preparation and clothes stay on during testing

Allows for Earlier Intervention

Objective and auto-diagnostic, near-instant ENDOSURE test results provide decision support for a timely diagnosis and faster access to medical and/or surgical treatment.

Patient Preparation Details

8-hour fast from food and water

No caffeine day of the test

2-day cessation of opioid containing medications

3-day no nausea, spasmodic, motility altering medications

Authorized for sale by Health Canada
